7 7 cin >> n1 > n1 > n3;

Module 4: Debugging and Logic - Part 2

Instructions: Debug the following code. Output the highest of three inputs. Update the code to be nested if statement if(n1 = n2 && n1 >= n3 Example: Output highest of three inputs cout << "Largest number: " << n1; #include <iostream> using namespace std; if(n2 == n1 && n2 >= n3) int main() { { cout << "Largest number: " << n1; float n1 n2 n3, if(n3 >= n1 && n3 >= n2) cout << "Enter three numbers: ";

return 0;
